A Little Rainbow of Mathematics

Target Language - French

Rouge, jaune, bleu, vert, orange, violet

Activity One

Give each student a self-directed learning colour card.

Each student is to colour in their own flower using the card to guide them.

Some students may benefit from a higher level of language support. Coloured pegs were used to provide additional support for students. Colour paper clips would also work well.

Note: These flowers were made from cardboard and attached to a lollipop stick. They could also be easily made with just white circles of paper divided into segments.
